

CV HW3

B07902072 資工四 陳光裕

Usage:
`python3 main.py`

(a) original image and its histogram

做法:

建立一個長度256的陣列Y，去儲存影像中每個像素的intensity次數，並用matplotlib.pyplot做
histogram

(b) image with intensity divided by 3 and its histogram

做法:

把每個像素的intensity除以3然後用長度為256的陣列Y儲存次數，最後做histogram

(c) image after applying histogram equalization to (b) and its histogram

做法:

利用histogram equalization的公式

$$s_k = 255 \sum_{j=0}^k \frac{n_j}{n}$$

把(b)的histogram轉換成新的分佈，然後按照新的分佈去更新影像，再計算更新後影像像素的intensity次數
